

# HSEUreg10001

# DIN Rail

Made in Germany

**1000W Programmable Power Supply**  
**current and voltage programmable**

## Specification:

- Metal housing
- 90% efficiency
- -25°C...+60°C full output power
- Galvanic insulated
- Controlled Fan
- Continuous short circuit protected
- Overload (OVP) & low voltage protected
- Soft start & auto-recovery
- Hold up time >30ms
- No base load required
- Electronic inrush current limiter 13.8Apeak
- Analogue interface 0-5Vdc/0-10Vdc/0-20mA/4-20mA
- Real time output monitoring of voltage and current
- External shutdown
- Sense control
- Series & parallel operation
- DIN Rail 35mm & wall mount
- Screw terminals AWG20...AWG6
- High reliability, shock & vibration proof
- 24 hours burn in test
- EMI/EMS EN61000-6-2,3, EN55022 class B
- IEC(EN)60950-1 in accordance to cUL60950/16950

**Available outs: 0...18V, 0...30V, 0...50V, 0...90V, 0...130V, 0...180V, 0...240V, 0...400V**

p.1/9 06.13E

(Subject to alterations. This product is not designed to be used in applications such as life support systems wherein a failure or malfunction could result in injury or death)

### Conception

The HSEUreg power supply series realizes very high power efficiency in a space-saving housing. Latest generation electrical devices relate to the high reliability of all CAMTEC products. The CAMTEC philosophy is, to employ 125°C low ESR ultra long life capacitors where expedient to achieve a superior lifetime of our products. The HSEUreg-series is made for Measuring & Control-Units to allow an easy design of P- or PI-controllers at an attractive price value.

### Thermal shutdown (p.6 fig.4)

The HSEUreg-series is featured with a thermal overload shut down and auto recovery behaviour.

### Control type

The power supplies accurately works down low output voltages down to 0V. Thereby the switching frequency is absolute stabile. The output response is linear to the input signal.

### Sensing feature (p.5)

The HSEUreg has a sense operation mode to compensate potential drop at the supply line. It is a standard for the 0...18Vdc, 0...30Vdc and 0...50Vdc types. For all other types it is a feature up on request.

### Shutdown feature

All HSEUreg units are featured with a shut down (open collector). ON= open contact, OFF= closed contact 1Vdc max. . The shutdown connections have an internal pull-up resistor with 6800  $\Omega$  at the plus line (+15V inserted).

### UI-characteristic:

| Type             | UA1  | IA1   | UA2  | IA2   | Pmax  |
|------------------|------|-------|------|-------|-------|
| HSEUreg10001.18  | 18V  | 50.0A | 18V  | 50.0A | 1000W |
| HSEUreg10001.30  | 30V  | 33.3A | 24V  | 42.0A | 1000W |
| HSEUreg10001.50  | 50V  | 20.0A | 40V  | 25.0A | 1000W |
| HSEUreg10001.90  | 90V  | 11.1A | 72V  | 14.0A | 1000W |
| HSEUreg10001.130 | 130V | 7.7A  | 105V | 9.5A  | 1000W |
| HSEUreg10001.180 | 180V | 5.6A  | 144V | 7.0A  | 1000W |
| HSEUreg10001.240 | 240V | 4.2A  | 190V | 5.3A  | 1000W |
| HSEUreg10001.400 | 400V | 2.4A  | 320V | 3.2A  | 1000W |

### Programmable Outputs:

#### Output Voltage & output current control:

The output voltage is linear proportional to the input signal. 10% input signal will deliver 10% of the maximum output voltage, 50% input will give a ratio of 50% output and 100% will provide 100% output. The USEUreg features 0-5Vdc, 0-10Vdc, 0-20mA or 4-20mA control signal input. The setting has to be chosen from a DIP-switch at the front-side. The input impedance is 1M $\Omega$  with voltage control mode settings. The input impedance is 500 $\Omega$  with current control mode settings.

| Pos. | 0 - 5V | 0 - 10V | 0 - 20mA | 4 - 20mA |
|------|--------|---------|----------|----------|
| S01  | 0      | 0       | 1        | 1        |
| S02  | 0      | 1       | 1        | 0        |
| S03  | 0      | 0       | 0        | 1        |
| S04  | 0      | 0       | 1        | 1        |
| S05  | 0      | 1       | 1        | 0        |
| S06  | 1      | 0       | 0        | 0        |
| S07  | 0      | 0       | 0        | 1        |
| S08  | 0      | 1       | 1        | 1        |
| S09  | 0      | 1       | 1        | 1        |
| S10  | 0      | 1       | 1        | 1        |

### Tolerance compensation adjust:

It is not necessary to adjust the basic of the output voltage or output current level. The engineers abandoned a compensation potentiometer to prevent malfunction from wrong basic adjustments.

### Warning:

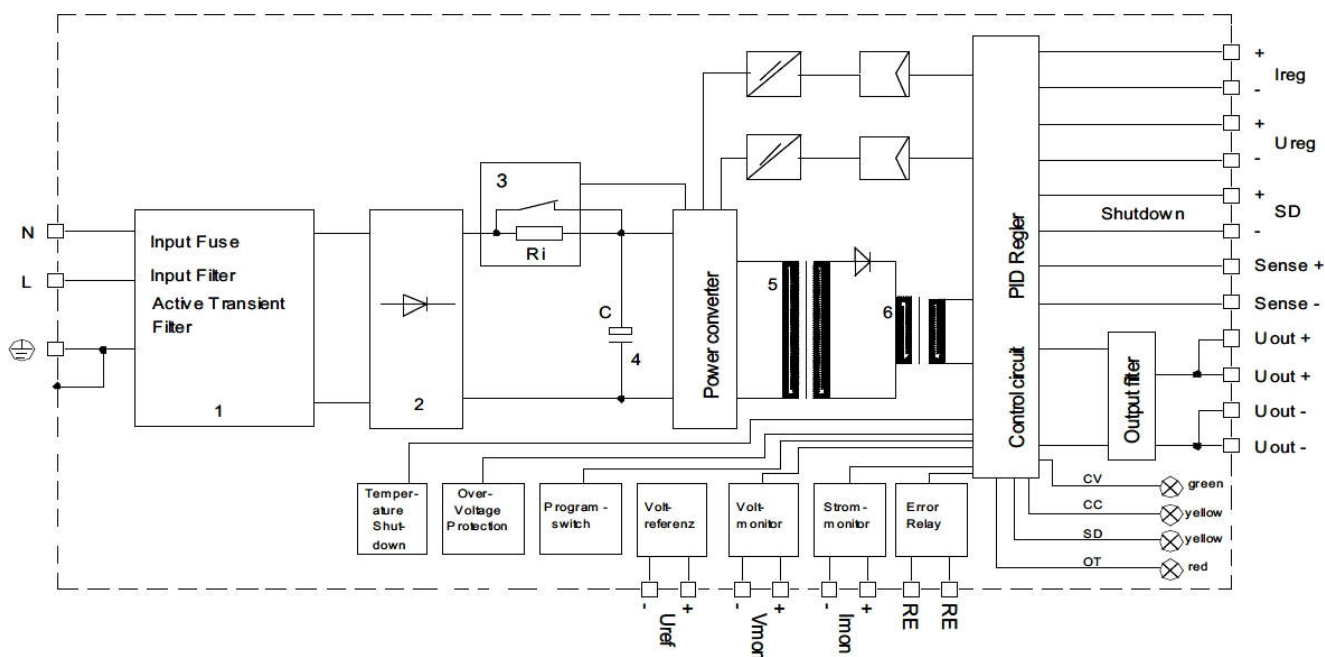

Tuning the output voltage over the maximum level may cause deviations from the technical data table. If the control inputs are not connected at all this may cause a minimum voltage of 100mV at the device main outputs.

All control I/O are connected to Uref. The current operation mode features a 500R input impedance to the control inputs. Be aware that your PLC is capable to trigger recommended line power.

### Technical Description

The HSEUreg-Series is a programmable switch mode power supply. Engineered and manufactured in by CAMTEC in Germany, it is designed for challenging applications like railway, drives, test-stands and machine-building. The HSEUreg provides a low Ripple-Noise, good Load-Regulation and high efficiency >90% (typ. @ 230Vac). High-end long life capacitors guarantee Hold-up-Time and extended lifetime of the power supply. Our HSEUreg-design starts complex loads easily. The internal control manages illegal operating conditions to prevent your system from failures. An operation failures recording is on board via galvanic insulated relay connection (page 2 table). All HSEUreg power supplies are idling-proof and short circuit protected. Supply units of the same type and output voltage feature parallel or series operation.

The HSEUreg also features active high input transients with suppressor diodes, X2-capacitors and varistors. The design rules set value on extended interference immunity and safety. The PSU is engineered in accordance to EN60950-1 and EMC-compatibility to EN55022 class B.

| Inrush duration (t <sub>inr</sub> ) | 400ms      |
| Over all power-up time              | 500ms      |

### Inrush Current Limiter Block Diagram

**Monitor Outputs SCM (fig.1)**

**Monitor Output Connections (fig.2)**

**Monitor Outputs**

The monitor outputs are buffered with OP-amplifiers, pre-resistors & parallel connected zener diodes (fig.1). The monitor outs can be selected between +5Vdc or +10Vdc control voltage. The signal is absolute proportional to the adjusted output voltage and current. The monitor outputs are non-floating. Connections see figure 2.

**Programmable Inputs**

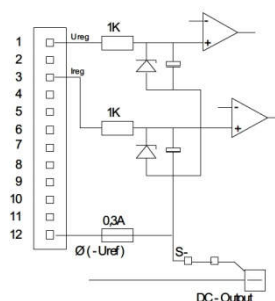

The output voltage and the output current are programmed with an analogue signal. The input signal is selectable between 0-5Vdc, 0-10Vdc, 0-20mA or 4-20mA with a front sided DIP-switcher. The response is very exact and. The output response behaves linear to the control signal.

The inputs are protected with internal pre-resistors, zener diodes and capacitors (fig.3). The capacitor limits the slow rate, accurately. The program inputs are non-floating. The monitor GND is connected to the negative pole of the main outputs. An incorrect connection triggers an internal PTC fuse. Unlocking the incorrect connection resets this fuse to being recovered (auto recovery).

**External potentiometer control mode (fig.4)**

The USEUreg features an internal reference voltage of Uref = 5,2Vdc or 10,4Vdc, selected with the DIP-switch. An external pre-resistor or a potentiometer of 10k can be connected to adjust the output voltage and current.

**Program Inputs SCM (fig.3)**

**Program Input Connections (fig.4)  
(example with external poti)**

**Sense Mode**

The HSEUreg provides sensing connections to compensate voltage drop down from wire system. The maximum compensation is 2V (fig.9). Be aware that this operation mode may recommend extended preparations concerning interference elimination or other protections. It should be set by the advanced user. Non-sense mode recommends the S +/- connected to AUX +/- with very short wires = Local Sensing (fig.5)

**Local Sensing (fig.5)**

**Remote Sensing (fig.6)**

**Battery Charger Mode (fig.7)**

**External Sense Protection (fig.8)**

**Maximum Sense Compensation (fig.9)**

**Battery Charger Mode (fig.7)**

The HSEUreg is the perfect a battery charger. It can be used as constant voltage (CV) or constant current charger (CC). As a stand-alone solution the HSEUreg features constant charging with automatic over charging protection. Used with an external control unit (PLC) the HSEUreg charges any battery backup application you need to install, at very low investment cost with a perfect control and system compatibility from the PLC.

We advise to use a circuit breaker to prevent from disconnections. Use fast Z-types with the double battery dc-voltage capability, like being used for semiconductor protection.

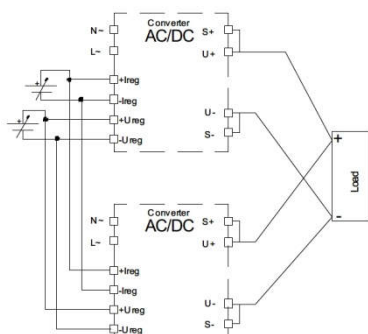

**Remote Sensing with battery charger**

Using the HSEUreg as a battery charger, avoid remote sensing operation mode. It may cause serious damage to the unit when the battery connections are being mixed up. If you really need to install Remote Sensing apply to the figure 8 circuit. Good values are 250mA for Si fuses and 3...5A capability for the diodes.

**Series Connection (fig.1)**

**Parallel Connection (fig.2)**

**Series Connection (fig.1)**

To increase output voltage equal HSEUreg can be connected in series. The control I/O should be galvanic insulated in the series mode. If not the minus main output is connected to the control I/O. Use our external option Isolating Transformer ADTW201 being validated with the HSEUreg. Be aware of safety norms if your target output voltage exceeds safety voltage.

**Parallel Connection (fig.2)**

To increase the output power up to 5 HSEUreg can be parallel connected. Advise using busbars to connect HSEUreg in parallel. Always use identical length and identical cross sections to the busbar.

**ADTW201 Isolating Transformer (option) (fig.5)**

The isolating transformer is used to galvanic isolate impressed current. The device is self powered. The input to output ratio is 1:1. For further information seek advice from page 10.

**Over Voltage Protection (3a)**

| Vout       | OVP    | Iout -25°C...+60°C | Iout +70°C |
|------------|--------|--------------------|------------|
| 0...18Vdc  | 22Vdc  | 50.0A              | 37.5A      |
| 0...30Vdc  | 35Vdc  | 42.0A              | 31.5A      |
| 0...50Vdc  | 59Vdc  | 25.0A              | 18.8A      |
| 0...90Vdc  | 105Vdc | 14.0A              | 10.5A      |
| 0...130Vdc | 150Vdc | 9.5A               | 7.1A       |
| 0...180Vdc | 210Vdc | 7.0A               | 5.3A       |
| 0...240Vdc | 280Vdc | 5.3A               | 4.0A       |

**Temperature Derating (fig.3)**

**Derating & Over Temperature (fig.3)**

If the ambient temperature exceeds trigger point >70°C the HSEUreg shuts down (metering point 10mm from outside device). After being recovered from over temperature the device restarts automatically to normal operation.

**Power Good (fig.4)**

**Function LED-Bar**

|    |     |                  |
|----|-----|------------------|
| CV | GRN | Constant voltage |
| CC | YEL | Constant current |
| SD | YEL | shutdown         |
| OT | RED | Over             |

**ADTW201 Isolating Transformer (fig5)**

**OVP over voltage protection (3a)**

The HSEUreg features over voltage protection. Exceed the OVP results in a locked shutdown mode. Resuming the failure causes automatic restart into normal operation.

**Power Good Signal (fig.4)**

Galvanic insulated open with failure, closed at normal operation.

**Technical Information ADTW201 external DC-Repeater**

## Quick down programming (Option PSINK)

The power sink option features returned power to be terminated very quickly. The PSINK records the output power status and guarantees a constant output voltage. The PSINK also provides quicker response time on setting down the output voltage.

### Applications sample: DC-drives & ATE test systems

Most of modern dc-drives are controlled by a PWM (pulse wide modulation) controller. Such controllers feature a very flexible speed control and high efficiency. A disadvantage of PWM controlled drives is the returned power into the system while decelerating the motor. The dragging of the motor inverts the drive into a generator. The returned power may cause trouble or serious defects to the dc-system, but definitely slows down the decelerating process of a drive. The returned energy is not terminated quickly enough and results in rising system voltage. An integrated load, called power sink, terminates the returned power very quickly and enables the drive to small dynamic latency (see figure).

ATE test-systems require quick down programming of the output voltage. Most ATE applications need to drag down the output voltage to 0V as a new testee is put into the system. A power supply without a power sink is simply not quick enough to terminate the energy at the output capacitors. Therefore an electronic power sink manages the output voltage to reset very quickly. Overall test time is being reduced and the testee is uncontrolled transient voltage protected.

### Dynamic response

A common power supply is usually not designed to absorb returned power from its connected load.

The negative load current will recharge the capacitor C<sub>o</sub>. The output voltage starts rising and get out of control.

This is essential to the mathematic formula  $dv/dt=i/C$ .

As a simple electronic power sink module is equipped to the power supply unit, the output voltage will constantly being kept at the desired level. The power sink provides very quick dynamic response. The output voltage only rises to a minimal notching ratio for a very short spell.

Using a power supply unit without equipped power sink in such application may result into serious damage or uncontrolled OVP activity to the power supply unit.

| Technical Data              |                  |
|-----------------------------|------------------|
| Outline                     | Factory built in |
| Continuous Power Capability | 5W               |
| Peak Power Capability       | 10W (100ms)      |

## Coating Option

We offer the USEULreg-series with optional coating. It is to be used in e.g. dusty, dirty, high humidity, or in awaiting quick temperature changes. Short circuit and corrosion at print board lines and at solder points can be prevented. The coat itself is a transparent acrylic resin. It is procured with a robotics varnishing machine.

Peters SL 1306 N-FLZ (transparent) IEC60216-1 2001, IPC-CC-830B, UL listed as permanent coating FileNo.: E80315, UL94V-0

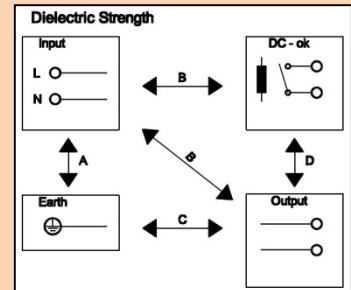

Ordering Information: ad extension C to the type number: HSEULreg10001.180TC

| Test         | Time | A       | B       | C <sup>1)</sup> | D      |
|--------------|------|---------|---------|-----------------|--------|
| Type Test    | 60s  | 2500Vac | 3000Vac | 500Vdc          | 500Vdc |
| Factory Test | 5s   | 2000Vac | 2000Vac | 500Vdc          | 500Vdc |
| Field Test   | 2s   | 2000Vac | 2000Vac | 500Vdc          | 500Vdc |

<sup>1)</sup>  $\geq 90\text{Vdc} = 1500\text{Vac}$

Type test and factory tests are conducted by the manufacturer. Do not repeat the test in field. Field test rules:

- Use appropriate test equipment which apply the voltage with a slow ramp
- Connect L1 and N together, as well as all output poles
- Use only AC test-voltages with 50/60Hz. The output voltages is floating and has no ohmic reference to ground.
- If testing output voltages are  $\geq 60\text{Vdc}$  remain to security directives. Use only isolated screw drivers to adjust output voltages.

## Terminal Connects:

**AC Main Input**  
GND common  
N - wire  
L - wire

**DC Mains Outputs**  
DC + voltage  
DC - voltage  
DC - voltage  
DC - voltage

## Inputs/Outputs

Ureg = programmable voltage input  
Ireg = programmable current input  
Umon = voltage monitor output  
Imon = current monitor output  
SD = shut down input  
Uref = reference voltage (poti connection)

## Standard Feature Connects

C= external power sink  
B= sense connections (S+/-) & operation failure relay (output)

## Mechanics & Installation of the HSEULreg

Stable metal/aluminium housing IP20. To allow adequate convection, a free air space of 50mm (top/bottom) and 5mm (sidewalls) is required; for active devices 15mm space from the sidewalls. For free air convection it is necessary to install the HSEULreg horizontal. You can use the DIN-Rail installation (equiped standard) with our patented 35mm DIN-Rail bracket according to EN60275. It is easy to mount/dismount while snapping it onto the 35mm DIN-Rail - any tools necessary. A wallmount backplate (option) is available, too

**Safety Instructions:** Please read all warnings and advices carefully before installing or operating the HSEUreg. Retain this operation manual always ready to hand. The HSEUreg must be installed by specialist staff only.

## Installation:

- 1.) The HSEUreg is designed for systems fulfilling the safety norms of dangerous voltages/energy and fire prevention
- 2.) Installation is restricted to specialists only, make sure that the AC wire system is free of voltage
- 3.) Opening the HSEUreg, making any modifications to it, dismantling any screws from it, operating the HSEUreg out of specification and/or using it in appropriate area will inevitably result in losing manufactureres guarantee; we decline taking any responsibility for risk of damages caused to someones health or to any installed system.
- 4.) Attention: The HSEUreg has an internal input fuse. It is necessary to wire an automatic circuit braker to the line. We suggest to use a 16A-type with B-characteristic. It is verboten to operate the HSEUreg without protective earth wired. It essential to install a line switch before the HSEUreg.

## Warnings:

**Disregard these warnings can cause fire, electric shock, serious accident and death.**

1. Never operate the HSEUreg without Protective Earth Conductor
2. Before connecting the HSEUreg to the AC wire system make all wires free of voltage and assure accidently switch on
3. Allow neat and professional cabling
4. Never open nor try to repair the HSEUreg by yourself. Inside are dangerous voltages that can cause electric shock hazard.
5. Avoid metal pieces or other conductive material to fall into the HSEUreg
6. Do not operate the HSEUreg under damp or wet conditions
7. It is verboten to operate the HSEUreg under Ex conditions or i Area

All parameters base on 15 minutes run-in @ full load / 25°C / 230Vac 50/60Hz, as otherwise stated.
