TC.ACS.50.528.4WR.S.LC

Programmable Bidirectional AC Power Source

Features

Scope of Application

The increasing number of alternative power sources like solar, wind driven or biological energy systems call for consistent and well demanding regulations for energy feed into the utility grid.

Manufacturers of such systems have to test and to prove the compliance of their equipment.

REGATRON TC.ACS represent the newest generation of fully programmable, full 4-quadrant grid simulation systems. Modular

architecture and additional operation modes make them an ideal choice for test and R+D laboratories.

TC.ACS - Programmable Parameters

Each phase individually programmable

Variation of fundamental frequencies up to 1000 Hz

Variation of phase angles

Variation of amplitudes

Step changes of fundamental frequency

Voltage drops either three phase or each single phase

Asymmetric three phase voltages

Micro-ruptures and flicker

Periodic and single shot under- and over-voltages

Superimposed harmonic and inter-harmonic voltages up to 5 kHz Specialized software for EMC characterisation

The Grid Simulation System as a Building Block of a Complete Test Environment

Owing to the full 4-quadrant capability of the TC.ACS system, almost all AC power equipment can be tested with the appropriate test procedures. An integrated test environment for solar inverters is composed of a Solar Array Simulation block (SAS), the device under test (DUT) and the grid simulator system (ACS). While the REGATRON SAS components allow for precise simulation of a user-defined solar array of any order under arbitrary conditions, the ACS simultaneously defines the different test conditions with respect to the grid connection. Depending on the requirements, the ACS functionality may be tailored with various software options. In addition to the *Basic Waveform Generator Mode* and the *Amplifier Mode*, which are within the standard scope of delivery, the options *Full Waveform Generator Mode* and *Load Simulation Mode* are available.

Software

An intuitive application based software with various options allows for manual operation, programming and for automated test runs. With the optional *Full Waveform Generator Mode* (GridSim) a set of predefined voltage shapes – sine, cut sine, square, triangle, sawtooth, user defined - facilitates a quick and easy definition of specific grid situations. This software option also offers freely programmable modulations on each phase for amplitude, frequency and phase angle.

Hardware

REGATRON grid simulator systems use a state of the art multilevel double inverter technology. The main advantages over existing linear power supplies are a substantial reduction of power losses, full 4-quadrant operation, very compact power units and the modular, cost-effective architecture. This allows the user to choose a system size well-fitting his requirements, including the possibility for future power expansions and/or splitting-up of the system into several stand-alone subsystems. The basic triphase power units of 30 kVA or 50 kVA may be expanded by simply paralleling further blocks even to big systems reaching 2000+ kVA.

Even higher power levels may be achieved by means of multi-system operation.

With the availability of the active neutral string, any single phase or asymmetric condition can be simulated. Additionally, the neutral can be connected to Protective Earth (PE), if required.

The system will allow for all relevant testing according to the grid-feed-in regulations (CENELEC, DIN, IEC). Note the operation as a grid simulator, as fast triphase full 4-quadrant voltage amplifier and as a programmable electronic load are possible.

Application Example

By the addition of a bidirectional regenerative DC power supply TC.GSS or G5 to such a test environment, even the role of an energy storage pack within the setup may be experienced.

REGATRON offers complete and modular SAS systems based on the widespread, field-proven TopCon Quadro and the G5 power supplies on one hand as well as complete grid simulation on the other hand. Modern switched-mode technology ensures very compact and reliable systems with high overall efficiency.

Technical Data

Key Values

Programmable Bidirectional AC Power Source	
Power range	050 kVA
Voltage range	3 x 0305 V _{ACrms} (L-N)
Current range	3 x 072 A _{ACrms}
Master-slave / multi-device configuration	parallel
Max. number of devices in system	up to 50
Case	19" / 11U

AC Lineside Ratings (X10)

Mains connection		
Mains connection type		3L + PE (no neutral)
Line voltage		3 x 360528 V _{ACrms}

	Voltage range	3 × 0±415 V _{DC}
Current range 3 × 0±20 A _{rms} ³⁾	Connection type	L1 + N / L2 + N / L3 + N
	Current range	3 × 0±20 A _{rms} ³⁾

AC Loadside Ratings (X20)

Technical Data (continued)

Protection

Built-in Protection	
Overvoltage protection	programmable
Overcurrent protection	programmable

Internal diagnostics

line input conditions, internal current conditions, temperature conditions, system configuration, system communication, power semiconductor temperatures.

Type of Protection (according EN 60529)

Basic construction	IP 20
Mounted in cabinet	up to IP 54 ¹⁾

Safety Interface

ISR (integrated safety relay)

2-channel (2x category 1, PL c according DIN EN ISO 13849-1:2015)

read-back circuit with forcibly guided contacts

PL e possible with 2-channel and external safety relay (optional)

I/O Interfaces

Control Port Input Functions (X610 – X612)	
Amplifier mode:	
Voltage setting L1: -432 V+432 V	-10+10 V
Voltage setting L2: -432 V+432 V	-10+10 V
Voltage setting L3: -432 V+432 V	-10+10 V
Maximum input voltage	±30 V
Sampling rate	80 kHz
Time delay input to output	<70 μs
Isolation to electronics and earth	125 V _{rms}
Input impedance	20.5 kOhm

Trigger ports BNC

Trigger Input X620 (Start)	TTL
Input impedance	10 kOhm
Trigger Output X621 (programmable)	TTL
Output impedance	560 Ohm (short-circuit-proof)
Isolation to electronics and earth	250 V _{rms}

Analog port 12-pin flush-type (X609)

4 Inputs for general usage	±9.5 V reference voltage
4 Outputs for general usage	±9.5 V reference voltage
Time delay power output to analogue output:	<50 μs
Output pins min. load impedance	2 kOhm
Input pins input impedance	330 kOhm
Sampling rate	80 kHz
Isolation to electronics and earth	250 V _{rms}

Communication Interfaces

USB Type B (X607)	
Integrated interface for remote control with the operation softw ACSControl/API	are
Isolation to electronics and earth	$250 V_{rms}$
Ethernet (X605)	
Integrated interface for remote control with the operation softw ACSControl/API	are
Isolation to electronics and earth	200 V _{rms}
RS232 (X606)	
Service interface	
Isolation to electronics and earth	125 V _{rms}

General Data

Weight & Dimension (see Figure 1)

Weight	approx. 150 kg
Width housing	444 mm / 17 ½"
Height housing	489 mm / 11 U / 19 ¼"
Depth with output terminals	635 mm / 25"

Terminals

Screw terminals for 635mm ² wires	d ≤8.5mm
AC lineside terminals	3L + PE
AC loadside terminals	3LN + PE

Ambient

ланысти		
Operating temperature		540 °C
Storage temperature		-1870 °C
Relative air humidity (non-conde	ensing)	095%
Installation altitude	0.	2000 m above sea level ²⁾
Installation		in 19" switch cabinet
	IEC 60721-3-3	indoor, air-conditioned
Vibration	IEC 60068-2-6	Test Fc
Operating orientation		upside
Storage, transport orientation		upside
Acoustic noise level		≤74 dB, @1 m

Liquid Cooling (LC) Specifications

(air-cooling possible with optional TC.LAE)
Material
Inlet/outlet on rear side size

Inlet/outlet on rear side size	G ½"
Liquid temperature inlet (non-condensing)	1550 °C
Minimum flow rate	2.5 l/min
Recommended flow rate	5 l/min
Maximum inlet temperature	25 °C @2.5 l/min
	40 °C @5 l/min
	50 °C @8 l/min
Operation pressure max.	4 bar
Pressure drop	70 mbar @5 l/min
Use cooling liquid with a 30% share of Antifrogen N	N [®] within a closed circuit

Standards

Protection class	1
Overvoltage category	III
Degree of pollution	2
Area of application	industrial

8 x Digital OUT	24 V _{D0}
Air Cooling	
External Liquid to Air Heat Exchanger (TC.LAE) ¹⁾	
In addition to the internal Liquid Cooling (LC)	
Max. Power @40 °C ambient temperature	35 kVA

Max. Power @32 °C ambient temperature

Dimensions

Figure 1: Front, right hand side and rear view. 19-inch module with 11 units in height.

1) Derating of Power depending on the ambient temperature so that the coolant inlet temperature <50 °C.

50 kVA

Datasheet

Further Description Details

Figure 4: Overloadability versus voltage

This product is developed, produced and tested according to ISO 9001 by REGATRON.

All product sppecifications and information contained herein are subject to change without notification.
